

psPipe™ - Promoting Environmental Protection

Green design is not merely the use of energy-efficient materials. It also involves the creation of products and systems with a light footprint on the environment over the full life-cycle. Life cycle ranges from production to transportation, installation, use and renewal. The Singapore Green Labelling Scheme (SGLS) symbolizes Fast Flow's commitment to a better environment for living. It is the region's most established eco-labelling scheme that authorises the use of environmental labels on products indicating overall environmental preferability within a particular product category based on life-cycle considerations.

Singapore Green Label Certification

On 4th September 2017, the Singapore Green Labelling Scheme Secretariat grant the right use of the Singapore Green Label for the psPipe™ as Environmentally Preferred Pipes (Product Certification No. 069-001-3009). Fast Flow is the first rainwater management systems provider in the region to have an entire range of UPVC pipe products certified with the Green Label Singapore. The Green Label Singapore is a confirmation that Fast Flow psPipe™ is at the forefront of green technology; that Fast Flow's LEAD-FREE pipe system products are leaders in terms of environmental performance, recycling, energy efficiency, regulatory compliance, and minimal carbon footprint; and that Fast Flow is setting the pace for green operations in the Rainwater System industry.

The Singapore Green Labelling Scheme Secretariat hereby grant

Fast Flow Systems Pte Ltd

1 Fifth Avenue #04-04/05 Guthrie House, Singapore 268802

the right to use the Singapore Green Label for

psPipe

069-001-3009

“Environmentally Preferred Pipes”

Validity: 4 September 2017 to 3 September 2018
